

## **Erratum Regarding “A Text Messaging Intervention for Dietary Behaviors for People Receiving Maintenance Hemodialysis: A Feasibility Study of KIDNEYTEXT” (*Am J Kidney Dis.* 2021;78(1):85-95.e1)**

As originally published, the online version of the Original Investigation “A Text Messaging Intervention for Dietary Behaviors for People Receiving Maintenance Hemodialysis: A Feasibility Study of KIDNEYTEXT” (Dawson et al, volume 78, issue 1, pages 85-95.e1), which appeared in the July 2021 issue of *AJKD*, contained errors in the visual abstract. In particular, the dietary adherence values at baseline and 6 months were reported as 46% and 34% in the intervention group, and 41% and 45% in the usual care group. The correct baseline and 6 month adherence values are 34% and 45% in the intervention group, and 46% and 41% in the usual care group.

The errors have been corrected in both the HTML and PDF versions of the article online.
