ON THE COVER  The Big Dipper at Blackpool Pleasure Beach in Blackpool, England, was originally built in 1923. The second-oldest operating rollercoaster in Britain, it is 3,300 feet long and has five big drops, including twisting and banked turns. Every drop is followed by a rise to set the next drop. These drops and rises mirror the drops and rises in blood pressure that occur as part of normal diurnal blood pressure variation. In this issue of AJKD, Borrelli et al report that the absence of normal nocturnal dipping is associated with higher risks of cardiovascular disease and kidney disease progression among patients with chronic kidney disease. See p 15.
